

Hamмам Zriba, Governorate of Zaghuan (N° 36)

Current operation situation

- The spring was harnessed by building a pool at the gushing spring. The pool is used as a common facility.
- Currently, the Hammam is fed by a borehole to ensure a significant and constant flow.
- The Hammam is managed by the commune of Zriba.

Geographical situation

- The thermal spring of the Hammam gushes in the bed of Oued El Hammam.
- The Hammam is accessed via a road of about 2 to 10 km in the south-east of Zaghuan.

Location:

- Geological map at 1/50.000 of Bou Ficha N° 36.
- Longitude (X) : 40°42'
- Latitude (Y) : 08°74'
- Altitude (Z) : 170 m

Water characteristics

- Variable flow at the spring (> 6 l/s) and the borehole (20 l/s during operation)
pH : 6.6

Classification : Chloro-sulphated Sodico-Calcic water

Therapeutic indications :

Rheumatology, dermatology, nervous system disease, respiratory system, gynaecology.
